This is a pre-existing template incompatibility between react-scripts 5 and webpack-dev-server 5. Let me patch craco config to strip the deprecated options.

Action: `file_editor str_replace /app/frontend/craco.config.js --old-str "webpackConfig.devServer = (devServerConfig) => {
 // Add health check endpoints if enabled" --new-str "webpackConfig.devServer = (devServerConfig) => {
 // Remove deprecated webpack-dev-server v4 options that crash on v5
 delete devServerConfig.onAfterSetupMiddleware;
 delete devServerConfig.onBeforeSetupMiddleware;

 // Add health check endpoints if enabled"`

Action: file_editor view /app/frontend/node_modules/react-scripts/config/webpackDevServer.config.js

Observation: [Showing lines 95-115 of 130 total] /app/frontend/node_modules/react-scripts/config/webpackDevServer.config.js:

```
95|   // It is important to tell WebpackDevServer to use the same "publicPath"
    path as
96|   // we specified in the webpack config. When homepage is '.', default to
    serving
97|   // from the root.
98|   // remove last slash so user can land on `/test` instead of `/test/`
99|   publicPath: paths.publicUrlOrPath.slice(0, -1),
100| },
101|
102| https: getHttpsConfig(),
103| host,
104| historyApiFallback: {
105|   // Paths with dots should still use the history fallback.
106|   // See https://github.com/facebook/create-react-app/issues/387.
107|   disableDotRule: true,
108|   index: paths.publicUrlOrPath,
109| },
110| // `proxy` is run between `before` and `after` `webpack-dev-server`
    hooks
111| proxy,
112| setupMiddlewares(middlewares, devServer) {
113|   // Keep `evalSourceMapMiddleware` before `redirectServedPath`
114|   devServer.app.use(evalSourceMapMiddleware(devServer));
115|
